

Vegetable Acid Oil (FFA) Product Datasheet

Item number: 40-014

General Information

The Vegetable Acid Oil is a by-product of the production of FAME-biodiesel. The vegetable oils used in the biodiesel production were basically rapeseed oil, soya oil and sunflower oil.

Typical values

Melting point	< 20	°C
Acid value	< 40	mg KOH / g
Energy value	min. 35	MJ / kg
Water	< 2	%
Ash	< 1	%
Unsaponifiables	> 6	%
Viscosity 40°	max. 200	cSt

Typical fatty acid values

C16	approx. 8	%
C16.1	< 1	%
C17	< 1	%
C18.0	approx. 3	%
C18.1	approx. 49	%
C18.2	approx. 28	%
C18.3	approx. 7	%
